DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-34, drawn to a method of feature extraction, specifically extracting a kernel from a multi-color matrix, classified in class 382, subclass 205.
 - II. Claims 35-46, drawn to image restoration using a combination of image filters including high-pass and low-pass filters as well as edge enhancement filters, classified in class 382, subclass 300.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because it could use any number of object-based color reconstruction methods including but not limited to the method of group I. Group I very specifically defines how the filter kernel operates where as Group II has general guidelines with regards to the filter required to provide the information needed to successfully interpolate. The subcombination has separate utility such as reconstructing features of damaged color photographs.

The examiner has required restriction between combination and subcombination inventions. Where applicant elects a subcombination, and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.
